Medication-Related Adverse Patient Events in Older Adults: A Fait Accompli or Public Health Crisis?

Joseph T. Hanlon, PharmD, MS
Professor of Pharmacy and Geriatric Medicine, University of Pittsburgh
Research Health Scientist, Pittsburgh VA CHERP and GRECC
Hanlonj@dom.pitt.edu

Key Points of Presentation

- Medication-Related Adverse Patient Events (MRAPEs) are common and cause considerable morbidity in older adults
- There are promising approaches that may reduce MRAPES but further research is needed
- Fundamental changes in health policy/health systems, and health professional education /clinical practice are needed to address this public health crisis
